

## “How lovely our KELVINATOR has kept the Salad”

Serve your guests the after-theatre bite, crisp, tasty and delicious—made up hours before, yet retaining every bit of flavor because the refrigerator is cooled by

# Kelvinator

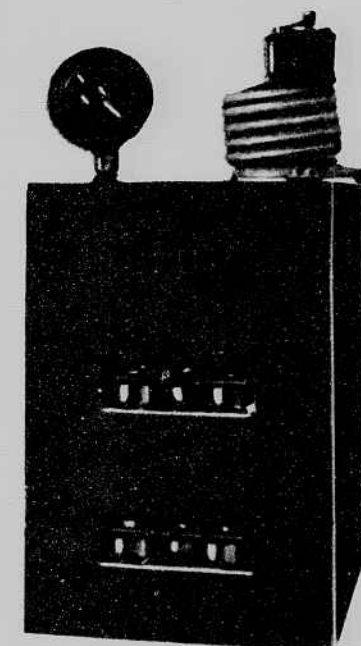

### *Refrigeration Without Ice*

For table use these cubes of pure, clear ice are frozen in pans that fit into space in the cold tank in the icebox. The cakes are easily removed from the pans and you may always be sure of a supply.

The temperature is automatically maintained by thermostatic control without attention from any member of the household, assuring a temperature colder and more uniform than the best ice-cooled systems.

No wasteful dripping ice. No overflowing pans. No worry as to replenishment. Kelvinator keeps the refrigerator cold night and day with surprising regularity. Sensitive to the slightest variation of temperature, it starts and stops without attention, maintaining a dry, crisp cold, preventing waste and decay.

Kelvinator can be installed in any refrigerator without muss or trouble. Once installed, you can forget hot weather worries. Kelvinator will keep your costly foods and delicacies always fresh and sweet.

This is the brine tank—the cooling unit—and will fit in the ice compartment of your refrigerator. Small trays filled with your favorite spring water may be inserted and fine little ice cubes frozen for table use. On top of it is mounted the thermostat, which automatically controls the temperature of the refrigerator.

*Write for booklet giving full details of Kelvinator Refrigeration without ice. Better still, visit our display rooms and see a refrigerator equipped with Kelvinator in constant operation.*
